

Blazer printing

Local printing with printer connected directly to the unit:

Desktop / System Setup / Printer

On the Local dialog box:

Select Port – the port the printer is connected to

Printer Name – the Name of the printer

Printer Identification - the exact name of the printer driver

If you want to share this printer for others to use, select Enable LPD Service for the printer

NOTE that the printer driver must be installed on the server

Network Printing on the 1000 series

Scenario: Customer wanted to print from his WT1200LE to a printer on the network

- Select the Desktop button
 - Opens up the Blazer “Start” menu
- Select System Setup / Printer
 - Printer Setup dialog box opens
- Select the Network tab

- Select LPD: field - Choose the LPD port – LPD 0 is default
- LPD Hosts: field – Put in the IP address of the Printer
- LPD Queue Name: - Put in the name of the printer
- Printer identification field – Put in the driver name of the printer. Must be exact

Select the Test Print button and it will print out a test page
